PROJECT CONTEXT

THE CHALLENGE

Situation

Streaming giants like Netflix host thousands of titles across varying countries, genres, and maturity ratings. Without structured analysis, this vast data remains an untapped resource.

> *"Understanding content distribution is essential for better content strategy and decision-making."*

KEY OBJECTIVES

Content Distribution

Analyze the ratio between Movies and TV Shows to understand platform focus.

Geographic Analysis

Identify top contributing countries and regional content dominance.

Rating Trends

Discover most common maturity ratings across different content types.

Regional Deep Dive

Investigate specific trends within Indian content, including top actors and release years.

METHODOLOGY

MY APPROACH

Workflow Overview

01 Data Preparation

Cleaned raw data by handling nulls, removing duplicates, and standardizing nested JSON fields using SQL string functions.

02 Complex Querying

Engineered advanced queries using **CTEs**, **Window Functions**, and Aggregations to extract deep patterns.

03 Business Logic

Solved 15+ real-world business problems covering distribution strategies, regional dominance, and genre trends.

04 Content Classification

Simulated moderation logic by categorizing content into "Good" vs "Bad" buckets based on keyword triggers.

05 Reusability

Developed a modular, well-commented SQL script library to ensure analysis is reproducible and scalable.

RESULTS & FINDINGS

KEY INSIGHTS DISCOVERED

Source: Netflix Dataset (Kaggle)

TOTAL VOLUME ANALYZED

8,807

Titles processed across Movies & TV Shows using SQL aggregations.

MOVIES

6,131

TV SHOWS

2,676

TOP 5 COUNTRIES

1. United States
2. India
3. United Kingdom

DOMINANT RATINGS

Movies (Adult)

TV-MA 32%

TV Shows (Teen)

TV-14 28%

TOP INDIAN ACTOR

Anupam Kher

`CASE WHEN description LIKE...`

AUTOMATED CATEGORIZATION

Classified content based on description keywords (e.g., 'kill', 'violence' vs 'love', 'happy') to simulate content moderation queues.

GOOD Family Friendly

BAD Mature / Violent

PROJECT SUMMARY

SKILLS DEMONSTRATED

SQL Mastery — CTEs, Joins, Window Functions

Business Logic — KPI Extraction, Trend Analysis

Data Cleaning — String Manipulation, Normalization

Deliverables Produced

SQL Query Library
Documented .sql files

Insights Report
Strategic findings

*Analysis based on Netflix dataset spanning 2008-2021

UP NEXT: COLLABORATION

```
SELECT * FROM collaboration WHERE status = 'open'; -- Looking
for data roles -- Passionate about SQL INSERT INTO
connections (user, type) VALUES ('Recruiter', 'LinkedIn');
```
